Dear Hiring Manager,
I'm sending my CV for the position offered hoping my skills and qualifications fulfill your requirements
Before speaking about my technical skills i want to briefly explain the reason why i chose the Computer Science world.
The first time i approached to Computer science i remember i found amazing the possibility to create literally a new world from scratch. I think that the only way to leave something to this world is through the Computer science. You can surely laugh but even if i became billionaire i will continue to program. It is more than a work for me as you surely understood from this sentence.

During **5 years** working in computer technology I had the opportunity to strengthen my Front-end developer (and in minor way Back-end) skills :

- Creation of Static pages with **Html 5**, **Css 3**, **Sass**, **Bootstrap**.
- **DOM manipulation** using **ECMAScript 6** and **Jquery**.
- Handling **Ajax** requests and **JSON** file with Jquery (even plain **JS**).
- Basic knowledge of **REACT** due to different bootcamp attended
- Creation of JavaScript applications (with **NODEJS** integrations too).
- Use of **CMS's** to develop multipages Sites (**Wordpress**, **DUDAMobile**, **Mono**, basic knowledge of **TinyCMS**).
- Basic use of **Photoshop** (PSD to Html/css/js) and **Illustrator**

Dolce Vita (Magdeburg) / Toro Grosso (Magdeburg) / Ristorante da Capo (Lindau)

I started as freelancer for the first 2 and half years making and fixing **wordpress** and pure **HTML/CSS** sites while i was Assistant Accountant for a Restaurants Manager in Germany and also helping with digitalization of the restaurants.

Interachting Web agency (Naples)

Afterwards I decided to dedicate completely to my passion for Computer Science and started to improve my skills getting a job as Junior Front end developer for 6 months in a Web agency where I considerably improved my Front-end skills.
This experience was really amazing because I wrote code using a first mobile approach therefore i could understand all the problems of compatibility both on different devices and browsers.
Here beyond that improve my experience with **HTML and CSS (Bootstrap 4 / SASS)** i learnt even new skills like **Javascript (Jquery, Ajax requests, Json)** and a few notions of **Php**.

Euroccor at Spotzer and ItaliaOnline Projects (Sofia)

Then I tried to satisfy my passion for informatics and traveling as well as making an experience abroad to work in an international environment and in a multinational company to understand the whole process behind a delivery of a site including all the passages.
My team duties were to create and manage sites for little and medium-sized companies.
In particular my duties were :

- Consultation Call to collect information from the client to create the Website
- Domain purchasing with "Smart-dominio" and DNS updating with "E-register ".

IVAN MADDALUNO

FRONT-END DEVELOPER

LANGUAGES

- Italian : Native
- English : Proficient
- German : Basic

• Creation of the site following the Client's information or/and filling out a BRIEF for other colleagues.
• Approval Call to check with the client if the requests have been satisfied.
• Constant and Total customer assistance during and after Site's production (whole life cycle).
• Targeted training both for Clients (**DUDAMobile CMS** / Some **E-commerce services**) and Colleagues (**HTML / CSS / JS / DUDAMobile CMS**).
• Creation of **two** internal " Knowledge base sites " on **Wordpress** for **Salesforce/Zendesk** procedures used by **Essent.Be** and **ItaliaOnline** Teams based in Sofia.
• Manual **QA tests**

Here I had either the chance to work using cloud solutions offered from **SalesForce** to manage the orders of client either possibility to improve technologies like **CSS, SASS, JS, Jquery** and few notions of **PHP**.

About my personal Soft-Skills :
•   Work with extremely proficiency in a Team as well as alone (Thanks to my Freelance experience)
•   **Tolerance** for stressfull deadlines. I think that with or without stress the deadline never change then **let's start it.**
•   Extreme **ductility** with different working roles, refined during my experience in an **Agile Development** (Euroccor) working in any position (**Production, Revision, Customer/Colligueas Assistance**)
•   Customer Service oriented.
•   Work with different projects in **contemporary** even if they are **not** started by myself.
After this experience i accepted a job in **Dublin** for **Cognizant**. Mainly it was Technical support with Google Suite products (**Google ADS**, **Analytics** and **Google Tag Manager**). My duties were to take care of the Technical Implementations for the different event tracking and tags creation. In particular here i improved my **Javascript** Skills seen that mainly i worked with **E-commerce Website** implementing code to track the purchases done on the website. I worked everyday with the **DOM** and **High-Order functions** to get the best tracking with no waste in performance (Memory Leaks or stack overflow).
After only four months i had to move for personal reasons in Krakow keeping the same position i had in **Dublin.** It was a simple switch, internal to Cognizant, between the Dublin office and Krakow office.

I look forward to the opportunity to discuss my background and abilities at your earliest convenience.

Thank you for your consideration.
Sincerely,
Ivan Maddaluno.
